SHOP AT FINGERTIPS

SALES PERFORMANCE DASHBOARD

BUSINESS INTELLIGENCE CASE STUDY

A data-driven analysis of sales performance, profitability, product, region, customer behavior, and business opportunities.

- Sales Performance
- Product & Category Analysis
- Regional Performance
- Customer Behavior
- Profitability & Margin Trends
- Operational Insights

JONATHAN B. AVENIDO

I. PROJECT OVERVIEW

The Shop at Fingertips Sales Performance Dashboard is a business intelligence project designed to analyze sales performance, profitability, product contribution, regional performance, and customer purchasing behavior.

The project transforms raw sales transaction data into an interactive dashboard that provides a consolidated view of business performance through six key performance indicators (KPIs) and eight analytical visualizations.

The primary objective is to help business stakeholders understand sales trends, identify profitable products and categories, evaluate regional performance, and recognize potential operational issues through data-driven insights.

The dashboard also demonstrates how Python can be used to transform, analyze, and visualize business data in an accessible and interactive format.

Project Objectives

- Monitor overall sales performance and profitability.
- Identify top-performing products and product categories.
- Analyze revenue contribution across different regions.
- Understand average customer spending and order value distribution.
- Monitor order cancellation patterns.
- Evaluate sales channel contribution and gross profit margin trends.
- Translate analytical findings into practical business recommendations.

- SNAPSHOTS OF PRODUCTS_CLEAN

II. BUSINESS QUESTIONS

The analysis was designed to answer the following key business questions:

1. How much revenue and gross profit does the business generate?
2. How many orders are being processed, and what is the average order value?
3. Which products contribute the highest revenue?
4. Which geographical regions generate the most sales?

5. What is the distribution of customer spending per transaction?

6. How does the monthly order cancellation trend change over time?

7. Which sales channels contribute significantly to total revenue?

8. Which product categories generate the highest gross profit?

9. Is the gross profit margin stable over the reporting period?

10. Are there unusual sales patterns that require further investigation?

These questions provide a foundation for evaluating business performance and identifying opportunities for improvement.

III. DATA ANALYSIS AND METHODOLOGY

The project followed a structured data analytics workflow, starting from raw data preparation through dashboard development.

1. Data Preparation and Cleaning

The sales dataset was imported into Python using Pandas.

Key preparation activities included:

- Loading the CSV source file.

- Reviewing dataset structure, columns, and data types.

- Checking for missing values and duplicate records.

- Converting relevant date fields into datetime format.

- Ensuring numerical fields were properly formatted.

- Creating calculated fields for sales, gross profit, and other performance metrics.

- Organizing data for aggregation and visualization.

2. Exploratory Data Analysis (EDA)

Exploratory analysis was conducted to understand the characteristics of the sales dataset.

The analysis focused on:

- Monthly sales patterns.

- Product and category performance.

- Regional revenue contribution.

- Average order value distribution.

- Cancellation behavior.

- Sales channel contribution.

- Gross profit and profitability trends.

3. KPI Development

Six major KPIs were developed to provide an executive-level overview of business performance.

| KPI | Dashboard Result |

|---|---:|

| Total Revenue | ₱2.31 Million |

| Total Orders | 5,332 |

| Average Order Value | ₱434.02 |

| Total Gross Profit | ₱866.53K |

| Gross Profit Margin | 37.44% |

| Repeat Customer Rate | 43.45% |

4. Dashboard Visualization

Eight charts were developed to support deeper analysis:

1. **Monthly Revenue Trend** – Monitors revenue movement over time.

2. **Top 10 Products by Revenue** – Identifies the products generating the highest sales.

3. **Revenue by Region** – Compares geographical sales performance.

4. **Average Order Value Distribution** – Examines customer spending patterns.

5. **Monthly Cancellation Trend** – Tracks changes in order cancellations.

6. **Revenue by Sales Channel** – Evaluates revenue contribution across purchasing channels.

7. **Gross Profit by Category** – Identifies the most profitable product categories.

8. **Gross Profit Margin Trend** – Monitors profitability consistency over time.

The dashboard uses a consolidated layout to allow users to monitor business performance and explore specific areas without manually reviewing individual reports

IV. KEY TAKEAWAYS

The dashboard highlights the following major findings:

1. **Strong Revenue Generation:** The business generated approximately ₱2.31 million in total revenue from 5,332 orders.

2. **Positive Profitability:** Gross profit reached approximately ₱866.53 thousand, representing a gross profit margin of 37.44%.

3. **Customer Spending:** The average order value was ₱434.02, providing a baseline for evaluating customer purchasing behavior.

4. **Customer Retention Opportunity:** Repeat customers accounted for 43.45%, indicating an opportunity to strengthen customer loyalty and encourage repeat purchases.

5. **Product Performance:** The top 10 products represent important revenue contributors and should be prioritized in inventory and promotional planning.

6. **Regional Contribution:** Central Visayas emerged as the leading revenue-generating region in the dashboard, followed by Metro Manila and Central Luzon.

7. **Category Profitability:** Toys, Electronics, and Fashion ranked among the leading categories in gross profit contribution.

8. **Profitability Consistency:** The gross profit margin remained relatively stable around its overall level for much of the reporting period, although some fluctuations were observed.

V. BUSINESS INSIGHTS

1. Revenue Performance and Sales Trend

The monthly revenue chart shows relatively consistent sales activity during the earlier reporting periods, followed by a significant decline around early 2026.

This pattern requires further investigation to determine whether it resulted from actual business performance, incomplete transactions, missing reporting periods, or changes in the dataset.

Business implication: Management should investigate the decline before making major sales or operational decisions.

2. Product Performance

The Top 10 Products by Revenue visualization identifies the strongest revenue-generating products.

These products can serve as priorities for inventory replenishment, product visibility, and targeted promotional campaigns.

Business implication: Focus on maintaining product availability and maximizing the sales potential of high-performing items.

3. Regional Sales Performance

Central Visayas generated the highest revenue among the regions displayed, with Metro Manila and Central Luzon also showing strong contributions.

Business implication: High-performing regions may provide opportunities for targeted expansion, while lower-performing regions require further analysis of customer demand and market potential.

4. Customer Purchasing Behavior

The average order value distribution is concentrated in the lower transaction-value ranges, with fewer transactions representing higher spending levels.

This indicates that the business may have opportunities to increase average customer spending through product bundling, cross-selling, and upselling.

Business implication: Introduce promotional bundles and complementary product recommendations to encourage higher-value purchases.

5. Order Cancellation Monitoring

The monthly cancellation chart shows fluctuations during the earlier reporting periods, followed by a sharp decline in recorded cancellations around early 2026.

Although lower cancellations may indicate improved order processing, the simultaneous decline in revenue suggests that the underlying data should be validated before interpreting this as an operational improvement.

Business implication: Monitor cancellation reasons, fulfillment performance, and order processing efficiency.

6. Sales Channel Performance

The revenue-by-channel visualization provides a comparison of the different purchasing channels.

Understanding channel contribution helps management identify where customers prefer to purchase and where additional marketing investments may be effective.

Business implication: Strengthen the customer experience across the major sales channels and evaluate channel-specific conversion performance.

7. Gross Profit by Category

Toys, Electronics, and Fashion are among the leading categories in gross profit contribution.

These categories provide opportunities for targeted merchandising and category-specific promotional strategies.

Business implication: Prioritize profitable categories while evaluating the profitability and growth potential of other product segments.

8. Gross Profit Margin Trend

The gross profit margin remained relatively stable throughout much of the reporting period, with some fluctuations in later months.

Maintaining this performance requires continuous monitoring of product costs, pricing decisions, and promotional discounts.

Business implication: Protect profit margins while pursuing revenue growth through effective pricing and cost management.

VI. SUMMARY

The Shop at Fingertips Sales Performance Dashboard provides a consolidated view of the business's sales and profitability performance.

ThroUgh six KPIs and eight visualizations, the project demonstrates how transaction-level data can be converted into meaningful business information.

The analysis identifies important revenue contributors, profitable product categories, regional sales patterns, customer purchasing behavior, and operational trends.

More importantly, the dashboard highlights areas that require management attention, particularly the significant decline in recorded revenue and cancellations during the later reporting period.

Overall, the project demonstrates the value of data analytics in supporting business monitoring, performance evaluation, and informed decision-making.

VII. CONCLUSIONS

The project demonstrates that an effective business intelligence dashboard goes beyond presenting numbers and charts. It provides a structured way to understand business performance, identify patterns, and recognize potential areas for improvement.

The results indicate that the business has established revenue and profitability contributions across multiple products, categories, regions, and sales channels.

However, sustainable business performance requires continuous monitoring of customer retention, average order value, product profitability, and operational efficiency.

The dashboard also reinforces the importance of data quality and validation. Unusual changes in sales and cancellation trends should be investigated before translating them into business conclusions.

Ultimately, the project demonstrates how Python-based analytics and interactive visualization can support better business decisions.

VIII. BUSINESS RECOMMENDATIONS

Based on the findings, the following actions are recommended:

| Area | Business Recommendation |

|---|---|

| Revenue Growth | Develop targeted campaigns to improve monthly sales performance. |

| Product Management | Prioritize inventory replenishment for top revenue-generating products. |

| Regional Strategy | Strengthen marketing initiatives in high-performing regions and assess growth opportunities in other regions. |

| Customer Retention | Introduce loyalty programs and repeat-purchase incentives. |

| Average Order Value | Implement product bundles, cross-selling, and upselling strategies. |

| Order Management | Investigate cancellation patterns and improve order fulfillment processes. |

| Sales Channels | Optimize the customer purchasing experience across major channels. |

| Profitability | Monitor product costs, pricing, and discounts to protect gross profit margins. |

| Data Quality | Validate the sharp decline in revenue and cancellations before using later-period results for management decisions. |

Recommended Management Priorities

Priority 1 – Validate the Data: Investigate the sharp decline in monthly revenue and cancellations.

Priority 2 – Protect Profitability: Maintain healthy gross profit margins through effective pricing and cost management.

Priority 3 – Improve Customer Value: Increase repeat purchases and average order value.

Priority 4 – Optimize Product and Regional Strategy: Focus resources on high-performing products, categories, and geographical markets.

IX. IMPACT AND BUSINESS VALUE

The dashboard provides potential business value through improved visibility, reporting efficiency, and analytical decision-making.

1. Improved Performance Monitoring

Consolidates key sales and profitability metrics into a single dashboard, allowing management to monitor performance more efficiently.

2. Better Decision-Making

Provides visual evidence of sales trends, product performance, regional contributions, and customer behavior to support more informed decisions.

3. Profitability Management

Highlights gross profit contributions and margin trends, helping identify profitable categories and opportunities for cost optimization.

4. Customer Retention Opportunities

Provides visibility into repeat customer rates and purchasing behavior, supporting the development of customer loyalty strategies.

5. Operational Monitoring

Makes unusual changes in revenue and cancellations easier to identify and investigate.

6. Scalable Reporting

Demonstrates how Python can automate data preparation and dashboard generation, creating a foundation for future reporting improvements.

Overall Business Value: The project transforms raw sales data into an accessible analytical tool that supports performance monitoring, identifies business opportunities, and encourages data-driven decision-making.

X. TECH STACK AND PYTHON TECHNICAL COMPETENCIES

The project demonstrates practical application of Python programming and business intelligence concepts.

Technology Stack

| Technology | Application |

|---|---|

| Python | Main programming language |

| Pandas | Data cleaning, transformation, and analysis |

| Streamlit | Interactive dashboard development |

| Matplotlib / Plotly | Data visualization, depending on the chart implementation |

| CSV | Source data storage and input |

| VS Code | Python development environment |

Note: The visualization library should be confirmed against the actual dashboard source code.

Python Technical Skills Demonstrated

1. Data Import and Exploration

- `pd.read_csv()`

- `df.head()`

- `df.info()`

- `df.describe()`

- `df.shape`

2. Data Cleaning and Transformation

- Handling missing values.

- Removing duplicate records.

- Converting data types.

- Creating calculated columns.

- Renaming and removing columns.

- Formatting date and numerical fields.

3. Data Manipulation Using Pandas

- `groupby()`

- `agg()`

- `sum()`

- `mean()`

- `count()`

- `sort_values()`

- `value_counts()`

- `loc[]` and `iloc[]`

4. Business Metrics and Calculations

- Total Revenue

- Total Orders

- Average Order Value

- Gross Profit

- Gross Profit Margin

- Repeat Customer Rate

5. Dashboard Development

- Streamlit page configuration.

- KPI cards and metric presentation.

- Multi-column dashboard layouts.

- Interactive charts and visualizations.

- Custom formatting and number display.

- Dashboard styling and layout optimization.

6. Analytical and Business Intelligence Skills

- Exploratory Data Analysis.

- Trend analysis.

- Comparative analysis.

- Product and category performance analysis.

- Regional sales analysis.

- Customer behavior analysis.

- Business insights and recommendations.

FINAL PORTFOLIO STATEMENT

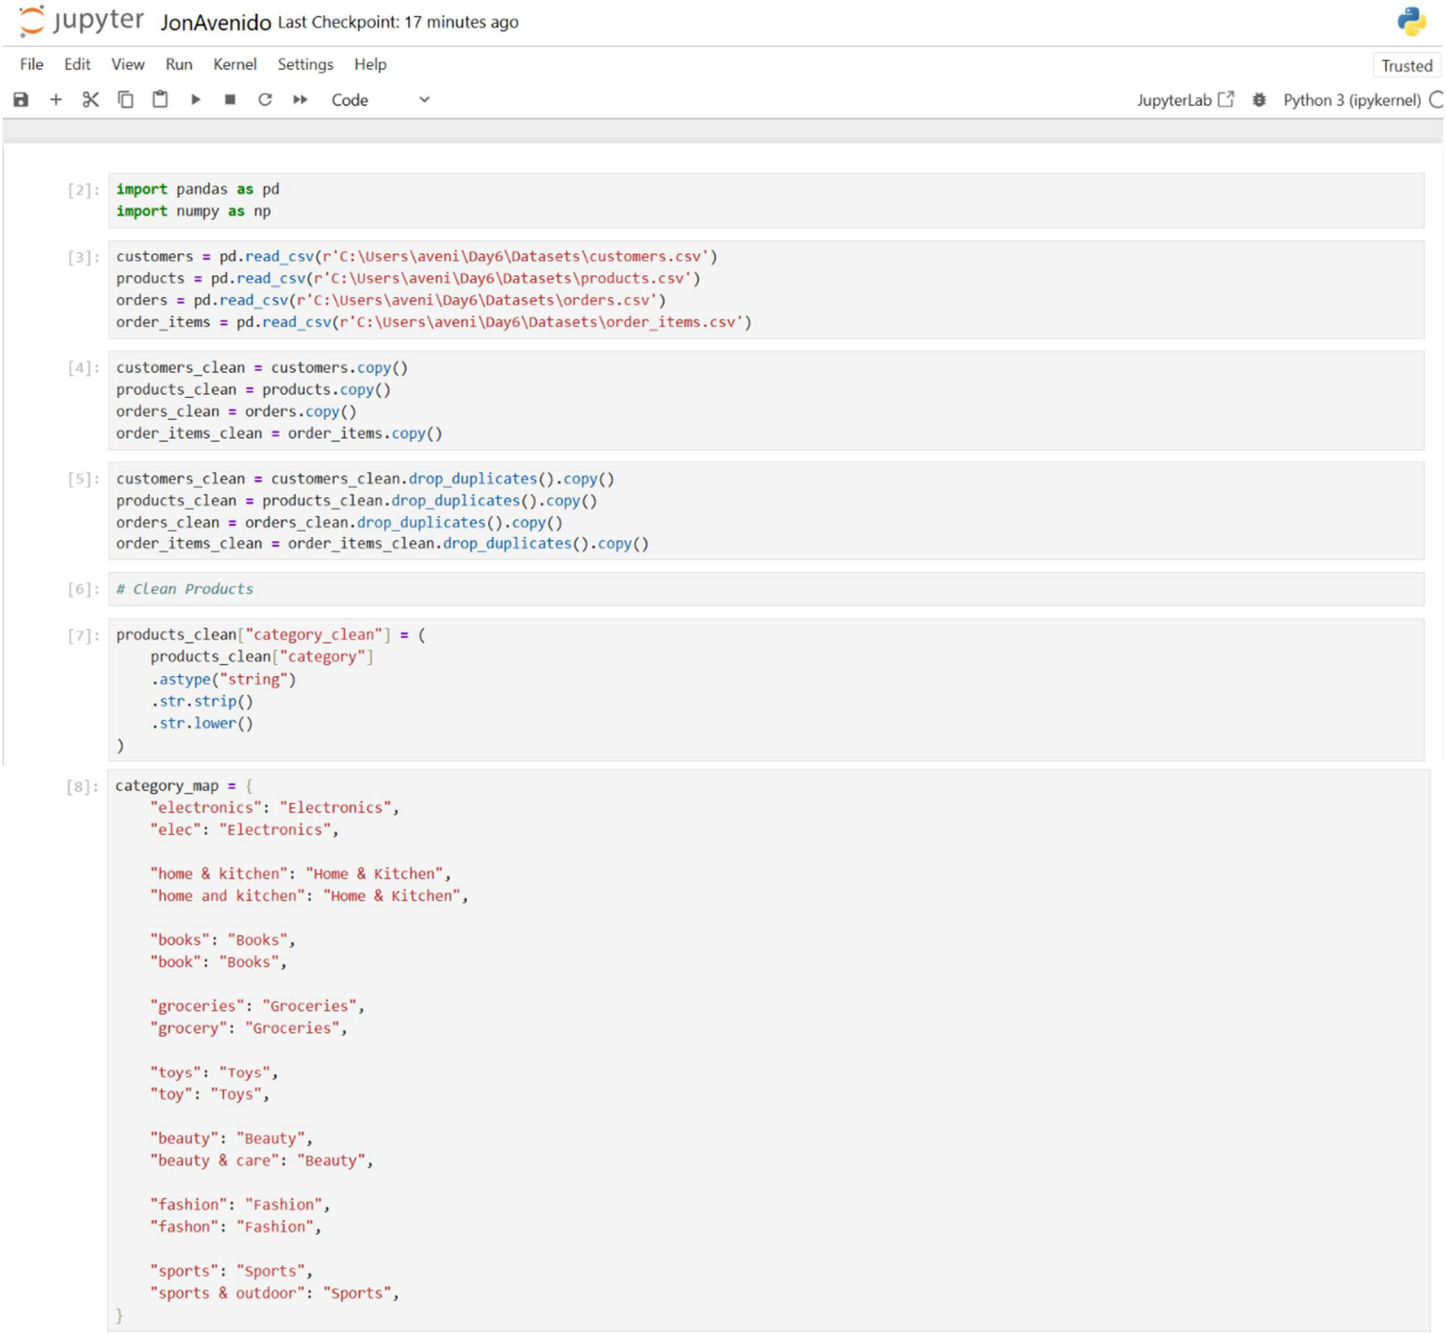

The Shop at Fingertips Sales Performance Dashboard represents my practical application of Python programming, data analysis, and business intelligence principles.

Through this project, I developed the ability to transform raw transactional data into meaningful business insights using data preparation, analytical techniques, KPI development, and interactive visualization.

Beyond technical execution, the project strengthened my understanding of how data can support business performance monitoring, identify opportunities, and guide management decisions.

My objective as an aspiring Business Intelligence Analyst is not simply to create dashboards, but to turn data into insights that create business value.
